

# The application of mixed linear models (LMM) for the estimation of functional effects on bovine stature based on SNP summary statistics from a whole-genome association study

WROCLAW UNIVERSITY  
OF ENVIRONMENTAL  
AND LIFE SCIENCES

K. Kotlarz, B. Kosinska-Selbi, Z. Cai, G. Sahana and J. Szyda

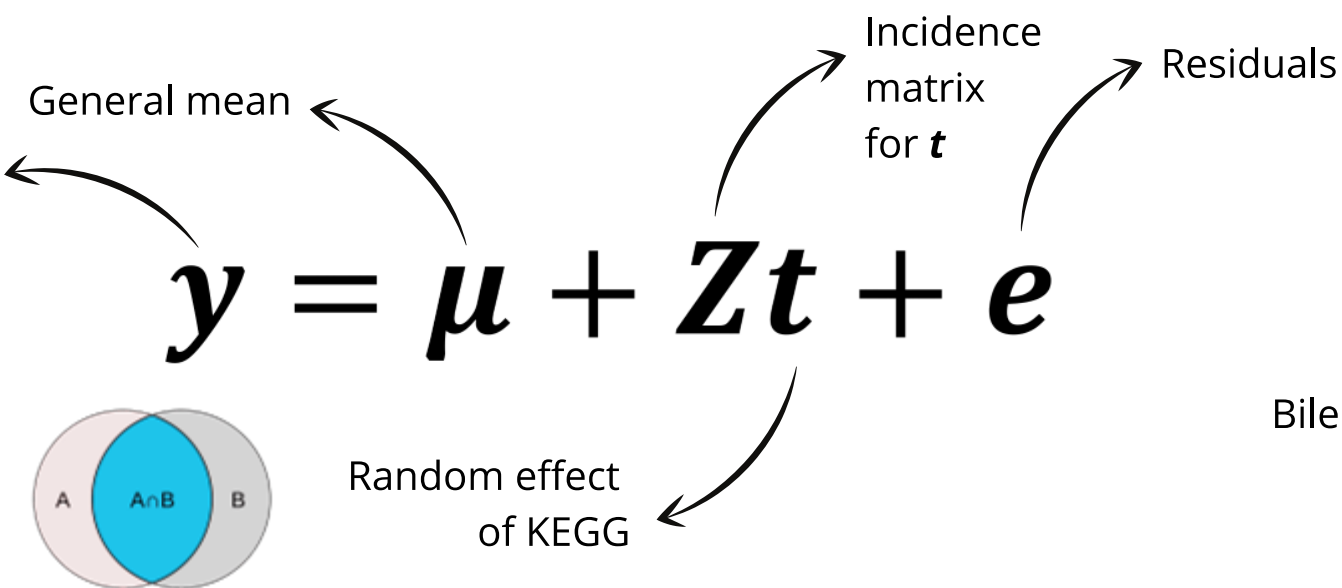

## 1 GWAS VS. UNITS

KEGG

| SNP additive effects  
on stature |

## 2 LMM

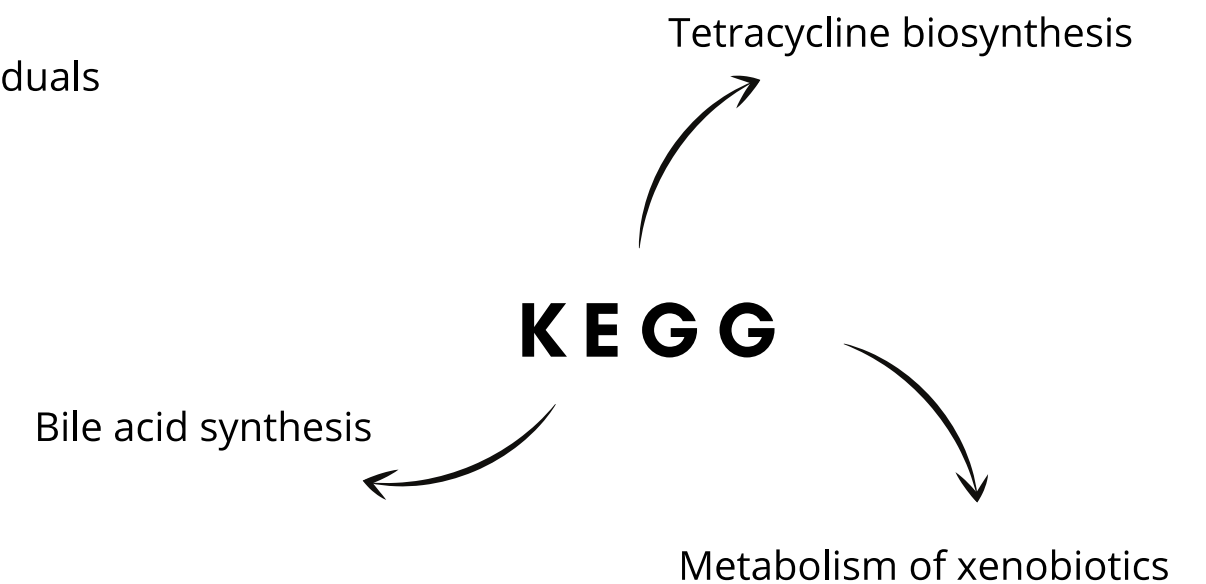

Three different bulls' breeds:

- Danish Holstein (366 877 SNPs)
- Danish Red Dairy (299 723 SNPs)
- Finnish Red Dairy (396 224 SNPs)

- The similarity between KEGGs → Jaccard Coefficients
- Henderson mixed model equations → Random effects
- Calculations → NumPy
